

Safety, Simplicity & Savings with Mojo Cloud WiFi

At Mojo Networks, we are dedicated to bringing unparalleled simplicity to K-12 WiFi. We do this with highly intelligent access points capable of automatic provisioning, configuration powered by an expansive cloud platform, and an array of easy-to-use smartphone apps. We have a heightened focus on safety, with industry-leading wireless monitoring and threat prevention that empowers you to protect student and teacher connections and keep the bad guys off your network.

Students, Teachers and WiFi: The Foundations of a Modern Classroom

Primary and secondary education (commonly referred to as K-12) is in the midst of an exciting technological revolution. In the wake of initiatives like 1:1 computing and flipped classroom methodology, there is a profound focus on giving educational institutions access to the technological tools necessary to succeed. These tools are critical to not only prepare students for their own personal futures, but to meet the challenges of working within and teaching to a 21st century world. And at the root of all this is WiFi – laying the foundation for the devices and systems of modern digital learning initiatives.

You Do the Math: Controller-Free + Cloud = The Best Platform for K-12

Back in the day, controllers made a lot of sense compared to individually managed access points. But now their heavy hardware approach has made growth difficult and upgrades costly. The good news is, today's stronger chipsets and faster processors mean access points can take on the control plane once again, making controllers truly a thing of the past. No controllers means less hardware in your schools and data centers, which also means less time needed to manage and maintain, and ultimately less to buy. Math is fun, right?

The Mojo cloud brings massive scalability to our controller-free architecture. When only the management plane needs to pass from the edge to the cloud, deployment, growth, and management can run via automatic processes. Simplified templates define thousands of access points at once and completely remove the need for heavy on-premise appliances. The cloud also brings efficiencies that translate to direct savings to our customers.

You Bring the 3 R's to the Classroom – Mojo Brings the 3 S's

Safety

There is nothing more important than protecting students, and that sometimes means protecting them from themselves! You have to watch out for hackers who want to gain access to your network, but keeping tech-savvy students from bypassing your controls can be just as time-consuming. So whether it's an active hacker trying to mess with clients or students and teachers connecting school-issued devices to their own personal hotspots, Mojo will see it immediately and stop it automatically.

- 24/7 wireless monitoring maintains a real-time list of active wireless networks and clients.
- Proprietary techniques ensure accurate classifications and allow for automatic quarantine of wireless threats.
- Keep students and teachers from connecting to personal hotspots or plugging personal access points into your network.

Simplicity

When you walk into a classroom and want to turn on the light, do you spend hours trying to make that happen? Of course not! Complex network designs, heavy controller-based deployments, and costly installation and maintenance have made WiFi a time-consuming endeavor. We aim to make WiFi configuration and deployment as easy as flipping on a light switch.

- Network configuration is streamlined and can even be accomplished with a few clicks on a smartphone.
- Mojo access points reach out to the cloud once they hit the network, downloading policies automatically. Minutes later your networks are up and running.
- The Mojo cloud handles 95% of the work, keeping overhead low so you can focus on other priority IT projects.

Demo

Want to learn more? Of course you do! An intimate demo is the best way to learn about Mojo and what we can do to bring you the best wireless platform that meets your digital learning initiatives.

Evaluation

After we show you what Mojo is all about, we want you to see it for yourself. Be sure to ask your rep about our no obligation 30-day trial.

Savings

It's no secret that K-12 institutions work with razor-thin budgets. Controller-based WiFi solutions have traditionally kept costs unnecessarily high due to complex licensing and extra hardware and hosting requirements. That's why we work hard to make sure our cloud-managed WiFi is easy to understand, affordable, and eligible for E-Rate funding without compromising enterprise functionality. Access points and a cloud subscription is all you need; offered in both bundled and unbundled forms to give you options.

- Licensing is simple to keep the E-Rate application process smooth and predictable.
- WiFi for less than \$.40 per student per month*.
- *Speak to your Mojo Sales Rep for more specific pricing details.

Mojo and E-Rate

The E-Rate Modernization Second Order (or E-Rate 2.0 for short) was published in December 2014 and aimed to revamp the program with an emphasis on "closing the WiFi gap" and making the funding allocation fairer so more schools have access. This is accomplished by allocating over \$2 billion to Category 2 services - and the purchase of WiFi is central to Category 2 services.

What does this all mean?

Mojo cloud managed WiFi is as easy to purchase as it is to deploy. We bundle our platform to include an 802.11ac access point (choose from indoor and outdoor models) with your cloud subscription and support.
