

Let's be honest – WiFi is arguably one of the most important components to modern digital learning initiatives like classroom flipping, blended and online learning tools, and expanding online testing efforts. Unfortunately, there has not been the same rigorous emphasis on ensuring schools have the best options to implement WiFi that supports these innovative ideas.

Controllers, with their heavy hardware approach, make growth difficult and upgrades even harder. Cloud-hosted WiFi helped, but the focus only shifted to ease of use and management efficiencies, with little to no attention paid to fundamental WiFi security and safety. And what good is a WiFi network if students and teachers can simply hop on their own personal hotspots and completely bypass IT controls?

This is where Mojo comes in.

There has never been a better opportunity for primary and secondary education institutions to make serious investments in enterprise WiFi platforms that make deployment and management easy, assure reliability at the edge, and bring renewed focus on safety and secure connections.

How does Mojo do it?

Supports top-down configuration, monitoring and reporting capabilities that make it easy to distribute single policies across thousands of locations simultaneously and deploy in a fraction of the time.

Network configuration occurs through simplified mobile web apps or a centralized cloud console interface so you can make or change your networks on the go from any device.

Wireless threat monitoring is constant and threat prevention can be automatically enforced; this provides actual protection for wireless clients from real threats.

Intelligent access points automatically connect to the cloud, find their instance, and download device properties, SSID profiles and security policies - installation is a breeze and you can expect the highest reliability from access points.

Detailed client and device statistics provide real-time oversight and inform threat prevention and network healing activities so you know exactly what is happening at any point in the network.

Visual troubleshooting tools for WiFi packet captures break down analysis barriers making it easier than ever to identify a problem, provide an effective solution and keep your networks at optimal performance.

It's all about the cloud managed WiFi

Simplicity

Mojo cloud simplifies network deployment so much that all you need is a smartphone and five minutes to set up campus-wide WiFi.

Safety

Mojo focuses on keeping students and your network safe from active attackers and student hijinks in accordance with CIPA compliance guidelines.

Savings

Mojo provides simple licensing for intelligent access points and cloud management, making WiFi investments incredibly cost-effective.

Demo

Want to learn more? Of course you do! A customized demo is the best way to learn about Mojo and what we can do to bring you the best wireless platform that meets your digital learning requirements. Click the link below or give us a call!

Evaluation

After we show you what Mojo is all about, we want you to see it for yourself. Be sure to ask your rep about our no obligation 30-day trial.
